

Do you care where your data is stored? REACH does.

At REACH we take data security and data residency seriously. That's why we not only store your data using industry best practice for safe cloud data storage, we also operate multiple cloud servers in key locations throughout the world to support best practice in data residency also.

For Canadian schools all cloud portal data is stored in Halifax NS and for USA schools all cloud data is stored in Dallas TX. This means that North American schools can be assured of domestic data residency for the private data of students, parents and staff at their school.

Secure cloud storage or self host REACH on campus.

For some schools there may also be internal school data management policies that regulate and limit the storage of student personal data to on-campus, school managed servers only. REACH also enables self storage for schools who wish to self-host.
